EDUCATION

B.S. Computer Science, University of Florida (UF) Honors Program

May 2027

Certifications: UF AI Fundamentals, Engineering Project Management & Engineering Innovation, CompTIA Security+, AWS Cloud Practitioner [In Progress]

Relevant Classwork: Penetration Testing, Data Structures & Algorithms, Operating Systems, Databases, Networking

PROFESSIONAL EXPERIENCE

Growth Product Management Intern: Disney Entertainment & ESPN Product & Tech

May 2026 - Aug 2026

- Led delivery of an **AI-powered customer acquisition chatbot**, analyzing **6000+ sign-up utterances** to identify friction, define product & prompt requirements, & guide implementation decisions; modeled a **1.5% US conversion lift** worth **\$2.69M** in annualized operating income & **22K subscribers**
- Drove product discovery for **AI-powered A/B experimentation tooling**, conducting user research to uncover workflow pain points & partnering with engineers to prototype and scope **Model Context Protocol (MCP)**-enabled recommendations
- Won **1st Place (Judges' Choice)** for **Daily Deck (TypeScript)**, an ESPN mobile athlete-discovery concept; designed and built the MVP, translating a personalization hypothesis into product requirements, interactive flows, & an experimentation roadmap

Wireless & Optical Networking Intern: Walt Disney World, Telecom Operations

May 2025 - Dec 2025

- Conducted discovery with technical stakeholders to identify observability & asset-data workflow gaps, then built **Python/Apache Airflow pipelines** for synchronization, validation, & monitoring, improving data reliability & visibility
- Built **Python REST API services & data-cleanup pipelines** for enterprise data migrations, identifying inconsistencies across source systems & developing scalable workflows to standardize & retrieve asset data efficiently with hash maps
- Identified an operational visibility gap & built **Splunk** dashboards to monitor IoT sensor telemetry from **The Things Network**, enabling real-time decision-making for pest control department & projecting **\$72k in annual savings**

SmartHQ Mobile Software Engineering Intern: General Electric Appliances

Jan 2025 - May 2025

- Partnered with Product & Engineering in an **Agile** team environment to build customer-facing SmartHQ mobile features in **Dart/Flutter/Kotlin**, integrating **REST APIs** & reusable components to expand subscription experiences
- Prototyped & pitched an **IoT-connected SmartHQ mobile experience** in **Figma**, prompting leadership exploration of new functionality beyond original project scope
- Led feature prioritization & engineering milestones for robotics competition while contributing **embedded C sensor drivers & finite-state machine logic**; achieved 100% **CppUTest** coverage & secured 1st place

PROJECTS

Raytheon Sponsored Capstone | AI-Assisted Cyber Reasoning Systems

Aug 2026 - Present

Amazon Leo Problem Statement Project | Satellite Connectivity

Aug 2026 - Present

TimeTab: Time-Locked Bill Splitter

Jun 2026 - Jul 2026

- Independently defined the product from problem framing to MVP, translating social bill-splitting friction into user stories, prioritized requirements, & **Figma** interaction flows
- Architected & built **end-to-end iOS MVP** in **Swift/SwiftUI** across UI, domain logic, persistence, & backend workflows; implemented a countdown-gated reveal, weighted-random split algorithm, UserNotifications, & haptics

Clarifina: Overall 4th Google, 3rd Vanguard - ShellHacks Hackathon

Sep 2024

- Developed an **AI-powered financial document workflow**, translating **Figma** interaction flows into technical requirements & integrating document parsing, personalized definitions, & user-facing outputs
- Designed & implemented a serverless **Typescript/Node.js** backend using **AWS Lambda**, **API Gateway**, **S3**, **Textract**, & **OpenAI GPT**, & **Firebase** to support AI-powered document processing & definitions

LEADERSHIP

President: Women in Computer Science

Aug 2024 - Present

- Leading development of internal tools for **500+ member organization**, defining requirements for a **Firebase** attendance & member management portal & **Python/Google Cloud Run Slack bot** that automate tracking & reminders
- Founded & launched First Byte, an 8-week technical onboarding program for incoming CS students, aligning leaders across WiCSE functions on program requirements, curriculum, milestones & cross-team execution

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, C++ | **Development:** Node.js, React, React Native, Flutter, SwiftUI, Firebase | **Cloud & Infrastructure:** AWS Lambda, API Gateway, Google Cloud Run, Apache Airflow, Linux | **Data & Observability:** Splunk, REST APIs, NumPy, pandas, IoT/telemetry pipelines | **AI & Developer Tools:** OpenAI API, AWS Textrack, Model Context Protocol (MCP), Postman | **Product & Design:** Figma, user research, product requirements, experimentation
